# THE LEADING LOGISTICAL RESOLUTIONS TO CARRY OUT THE WIND FARMS

## THE COMPANY

The Rubino Company (RC) includes two partnerships: The Rubino Cranes Company and the F.lli Rubino Transport Company. The former provides at lifting and assembling services, whilst the latter supplies extraordinary transport services.

The two Companies' services are interconnected with the main purpose to show to the service users a thorough logistical resolution. Most of the working department performs in Italy; however, because the RC has developed a wide knowledge and has gained a long-term relationship with some important European partners, such as the VanDerVlist Firm, its activities have widespread all over Europe, achieving excellent outcomes.

### The ultimate resolution

To produce Wind Farms (W-F), the RC suggests a comprehensive ultimate resolutions acting from EX WORKS in the whole Europe.

The RC supplies services that include: loaded operations, motorway and seaway transports,

management of harbour and customs checks, unloaded operations, storage of the items inside the port and inside the working area, lifting and assembling operations.

The RC's ultimate resolution manages:

- to pull down unexpected costs
- the liability of an-only in charge chief
- the best organization of the work in the yard
- to eliminate risks following the interferences between different working companies

## CUSTOMERS

The RC's most important customers in the international W-F sector are: the GE Wind Energy, the Vestas and the Gamesa.

## THE MECHANICAL YARD

The RC's W-F yard is made up of:

- telescopic cranes to 650 tons
- trellis cranes to 300 tons
- Aerial platforms to 54 mt
- Forklift to 5 tons

- Semi-trailers stretching to 40 mt and lowering to 40 cm up the road
- Extraordinary transport trailers to 60 mt, to 230 tons, with 4 – 6 – 8 – 10 unit axles

The whole client's project will be well managed and monitored: the RC's supervision team controls the whole project through its development. The team is constantly present at the most strategical spots, such as the port area, the journey on the road and the working yard.
